Education

- **Master's of Science - Human Centered Design and Engineering**
University of Washington | Current - Expected 2027
- **Bachelor of Arts - BA, Psychology**
California State University, Monterey Bay | August 2019 - December 2021
- **Associate of Arts - AA, Psychology**
Rio Hondo College | August 2016 - May 2019

Professional Experience

KForce-Amazon (Contract)

Data Collection Researcher | April 2026 - Current

- Own end-to-end execution and reporting for human subjects research sessions as sole Seattle-site researcher, gathering near-field acoustic voice data to train/evaluate an on-device AI voice model for Echo Frames (AI-powered smart glasses), supporting voice command detection, camera control, and field-of-view query features.
- Identify pain points in real time during sessions and implement quick process fixes, sustaining a 100% data capture rate across ~232 sessions and ~58 participants — reported findings and process improvements to cross-functional stakeholders.
- Leverage AI tools to streamline session reporting, documentation, and cross-team communication workflows.
- Authored a troubleshooting guide and refined the moderator SOP, adopted org-wide; reduced average session time 33-44% and troubleshooting resolution time 70-80%.

Experis - Meta (Contract)

Data Collection Researcher | Jul 2024 - March 2026

- Conducted end-to-end data collection and reporting on wearable AI hardware, including Meta Ray-Ban AI glasses and Quest 3 headsets, within AI and emerging technology research environments.
- Documented usability friction, behavioral patterns, and evaluator insights on AI-powered wearable prototypes; findings directly informed product development decisions.
- Used AI tools to automate reporting and documentation workflows, standardizing SOPs and training materials across internal and vendor teams.

Quality Assurance Analyst

Westpac Labs | 2022 - July 2024

- Evaluated and tested wearable hardware devices as part of root-cause and qualitative defect analysis, maintaining error rates below 0.5% across 90,000 monthly specimens.
- Designed interactive KPI dashboards, improving visibility into performance trends and supporting operational decision-making.
- Improved laboratory turnaround time from 88% to 97% through workflow evaluation and process redesign.

Behavioral Neuroscience Assistant Researcher

California State University, Monterey Bay | 2020 - 2022

- Prepared and submitted research protocols for IRB review as part of mixed-methods behavioral research involving human subjects.
- Designed and deployed Qualtrics surveys, collected mixed-methods data, and conducted ANOVA/correlation-based statistical analysis.
- Presented findings at WPA and university symposiums; produced research posters and academic reports.

UX Research Projects & Applied Experience

Washington 211 — Usability Research & Project Lead | University of Washington | Winter 2026

- Designed a triangulated usability study combining background research, heuristic evaluation, and moderated observation sessions.
- Led stakeholder coordination with WA211 and DSHS to align study goals with accessibility standards for TBI participants.
- Developed screeners, task flows, and facilitation protocols tailored to cognitive load constraints.
- Captured behavioral usability data including navigation paths, task success, and qualitative feedback.
- Synthesized findings using thematic analysis to inform product recommendations.

Orientation Express — Onboarding Experience Platform | UX Research & Project Coordination | Fall 2025

- Led mixed-methods UX research including surveys, student interviews, and stakeholder interviews.
- Conducted usability testing and translated findings into iterative design improvements.
- Synthesized insights into design principles emphasizing accessibility and reduced cognitive load.
- Collaborated with cross-functional teammates to develop user flows, personas, and prototypes.

Skills

Human Subjects Research: Participant recruiting & screening, informed consent, IRB protocol preparation, session moderation, equipment setup, audio/speech interaction auditing

UX Research: Contextual inquiry, workflow shadowing, affinity synthesis, usability evaluation, guideline creation, mixed-methods analysis

Quantitative: Precision-recall analysis, descriptive stats, ANOVA, correlations

Qualitative: Interaction review, error pattern analysis, thematic synthesis, observational research

Technical: SPSS, Qualtrics, SQL, Excel, Claude, ChatGPT, Amazon Quick,

Collaboration: Cross-functional communication, vendor alignment, documentation, training material creation

Certificates

Human Subject Research – CITI program | 2020 – 2023
